

Calibrated{Q} MP4 EX Import v1.5 UPGRADE – IMPORTANT - Read Me

Calibrated{Q} MP4-EX Import NOW defaults to reporting Audio as MONO tracks instead of a STEREO track. To continue working with current projects, AFTER upgrading please go to the CalibratedQMP4EXOptions.app located in the /Applications/Calibrated/Applications/Options folder and switch the 'Audio' to 'Stereo' – press the Apply then Ok button and then restart your computer. Now Calibrated {Q} MP4-EX Import v1.5 will report audio as Stereo just as before with v1.0.

If you use the default Dual Mono setting, Final Cut Pro may still 'remember' previously imported MP4 files using version 1.0 as Stereo.
